Migration of TTQV 2/3/4 data

QuoVadis can automatically import all your data and maps from an older TTQV3 or TTQV4 installation.

<u>Important note:</u> You should compress your databases in QV4 before importing them into QuoVadis to fix possible problems with database integrity. You find an instruction on how to do this at the end of this chapter.

After the installation of QuoVadis7, a data migration assistant will automatically start if older versions of QV3 or QV4 are detected on your PC.

However, you can also start the assistant from the database menu of the X-Plorer through the function **Import QV3/4 Databases**.

Assistent - Import TTQV3/4 Databases		
Step 1/2 - This assistant will help you to import TTQV3/4 Databases		
Which TTQV3/4 databases to import		
Automatically all databases from this TTQV4 installation:		
No TTQV4 found on this computer		
 Import databases qu3/qu4 Import user dems, datums, grids Import GNDB Select one or multiple QU4-databases on harddisk 		
Please compress Qu4-databases in QV4 before importing them into QV6.		
< Back Next > Done Cancel		

The assistant will detect older QV installations automatically and will provide the option to import all databases. Additionally, you can import existing databases through the software switch **Import GNDB**. The worldwide Geographic Database will not be imported to QuoVadis because this has bee recompiled for Version 6 and is delivered with your QuoVadis version. So, this function is limited to your own geographic databases and to geographic databases of some topomaps which may be compatible with QV. The scope of supply of QuoVadis 7 contains a location database with nearly 5 million entries. You can download them from the download page of the QuoVadis-shops. You can also import digital elevation models (DEMs) which may be part of your QV4 installation and user-defined grids or map datums. If you would like to do so, activate the **Import own dems, map data, grids**.

If you would like to selectively import a single database, choose **Manually select QU4-database on harddisk** and select the file(s) of your choice after clicking ...

Proceed by clicking Continue.

Assistent - Import TTQV3/4 Databases	? ×	
Done		
Import		
These database(s) will be imported into:	QV_Data	
Conversion of 1 databases: OK: D:\QuoVadis\qu4\QV_Data\Airports_Worldwide.qu4 -> D:\QuoVadis \qu5\QV_Data\Airports_Worldwide.qv5db Done, time=48,61s		
Please compress Qu4-databases in QV4 before importing them into QV6.		
< Back Next :	> Done Close	

To the upper right, QV will indicate to which database element the selected data will be imported. If you start the assistant manually from the database menu, the actual database which is marked in the X-Plorer will be used as default destination.

Thereafter, please click **Done** to start the import. According to the amount of data, the impoprt process can last quite a while. However, you can abort the data import at any time and continue later on. Data which have already been imported will be detected and will not be imported once again.

At the end of the import process you will find a summary which might also include error messages which occured.

<u>Remark:</u> If maps are imported from older QV versions, map files will not be duplicated but stay in their original directories. So there is no need to worry about waste of hard disk space.

<u>Important note:</u> You should compress your databases in QV4 before importing them into QuoVadis 7 to fix possible problems with database integrity.

This short clip (with German user interface) shows, how to compress databases:
