

# Xplorer Window

All data is stored in SQLite databases. To work with your data, **Xplorer Window** is used. Xplorer window can be activated with one of the two buttons in the upper right corner of the main window:

- In the **Tree view** you can see all databases (blue barrel symbol) and the tables they contain
- In the **List view** you can see the content of the table selected in the Tree view
- In the **Properties** you can see all details of the object(s) selected in the List view. All details can also be changed here.

Of course, you can create, delete, move or copy new DBs, tables and data in the Xplorer with the usual cut-copy-paste commands or by drag-drop. For most operations, there is an undo function for security reasons and the recycle bin helps to prevent accidental deletion.

You can come across the following icons in the Tree view

Directories	
	A directory, can contain DBs or other directories, corresponds 1:1 to the directory structure on the hard disk
	An open directory
	A connection to a cloud service; green, if connected (checkbox set)

	A connection to a smartphone with QVM	
Databases		
	Standard database, always on top	
	User database	
	Open database	
	Read-only database	
	Error occurred during opening, details in the info	
Tables		
	Table for maps	
	Table for drawings	
	Table for projects	
	Table for tracks	
	Table for routes	
	Table for waypoints	

The name of a table can be preceded by **(Active)**. This means that this table is “active” as a storage location for new objects of this type. See [here](#).

Devices	
	The list of all connected USB devices
	An Android device with QVM or a GPS or NMEA receiver
