Enthaltene Länder:

South-America
18.08.2019 OSM/America/Map/NEW 1739,0 MB
Typ: Vektorkarte ohne Routing
Enthaltene Länder:

Functions

Select a package and open the context menu or the options ***menu:

Open web page	Opens the browser with the address of the map provider
Download and install	Download and install the package.
Download link address copy	Copies the download link address to the clipboard. This allows you to use a download manager or a browser for download. After that you have to install manually with Tools - Install Package.
Open map	For already installed packages, opens the map in the map window
Show in database	For already installed packages, go to the corresponding entry in the Xplorer
Delete	For already installed packages, delete the package from the database and all files from the hard disk

Memory location

The size shown in the list for each package is the size of the download. Unpacked and installed usually requires two to three times the amount of memory. Packages are downloaded to your computer's default download folder and remain there in case they are needed again. To save space, however, they can be deleted manually at any time.
